

## **Definitions**

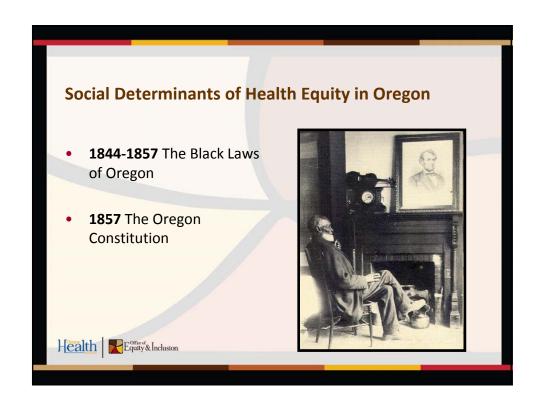

- Health Disparities are measureable differences in the incidence and prevalence of health conditions, health status and outcomes between groups.
- Health disparities are referred to as <u>health inequities</u> when they are the result of the <u>systematic</u> and <u>unjust</u> distribution of the essential elements of health (social determinants).
- Health Equity occurs when everyone in a community has the ability to achieve the highest level of health possible, regardless of who you are, how much money you have, where you live
- Social determinants of Health are life-enhancing resources, such as food supply, housing, economic and social relationships, transportation, education, and health care, whose distribution across populations effectively determines length and quality of life."
   Source: Promoting Health Equity: A Resource to Help Communities Address Social Determinants of Health
- Social determinants of Equity are the structures, policies, practices, norms, and values that
  create societal structures and systems of power that fairly distribute life-enhancing resources.
  The social determinants of equity include racial and social justice and shared power.

### **Social Determinants of Health Equity in Oregon**

- 2008: Oregon Driver's license law
- 2008: AMA apologizes for racial discrimination

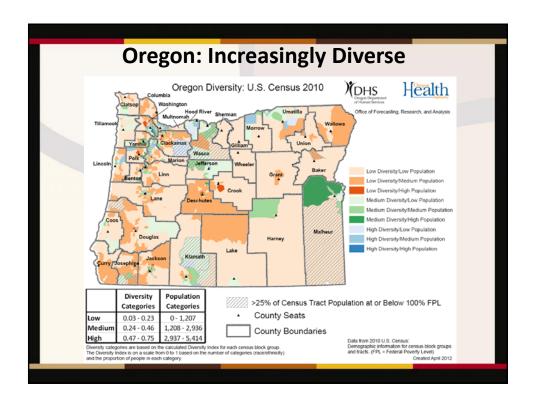

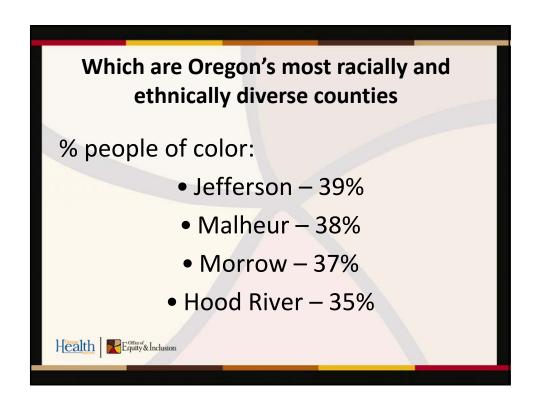

Health inequities are systemic, avoidable, unfair and unjust difference in health status and mortality rates and in the distribution of disease and illness across population groups.

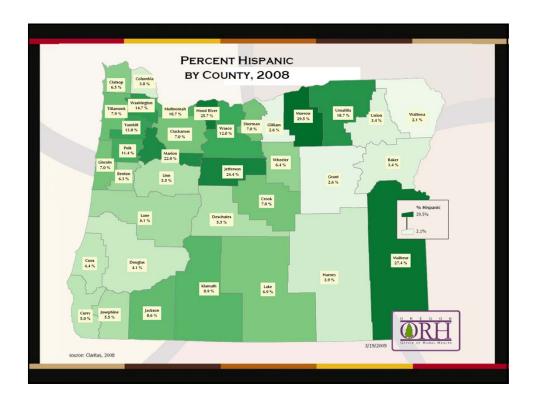

They are sustained over time and generations and beyond the control of individuals.

They have roots in our systems, structures and policies.

	Oregon Language Data							
	Hispanic or Latino (of any race)	Black/AA alone, not Hispanic or Latino	AIAN alone, not Hispanic or Latino	Asian alone, not Hispanic or Latino	Two or more races, not Hispanic or Latino	White alone, not Hispanic or Latino		
Total Population	437,802	64,116	38,714	136,424	110,607	2,999,166		
Population 5 years and older	383,111	59,574	36,357	128,561	96,134	2,848,792

## **Causes of Health Inequities**

#### Barriers to health care

- Health insurance
- Transportation
- Language, culture

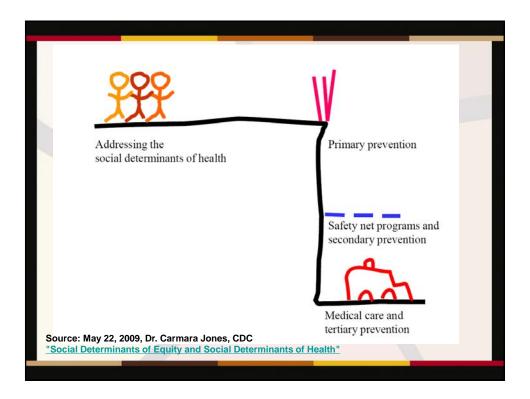

#### Differences in quality of health care

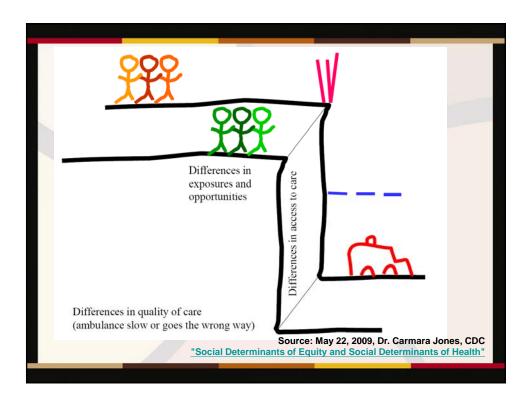

- Different treatments
- Discrimination
- Doctor-patient communication

#### Social, economic, and environmental factors

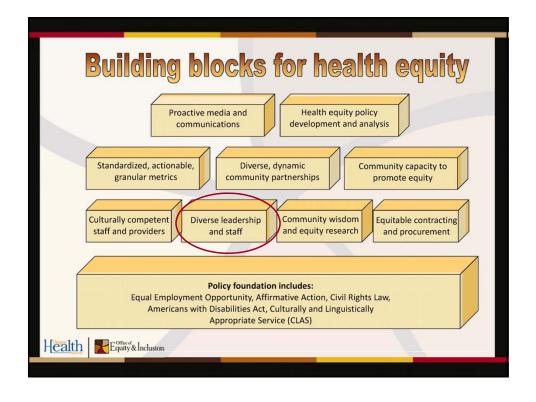

- Income, wealth, education, occupation
- Neighborhood conditions: proximity to grocery stores, liquor stores
- Environment : lead paint, air quality

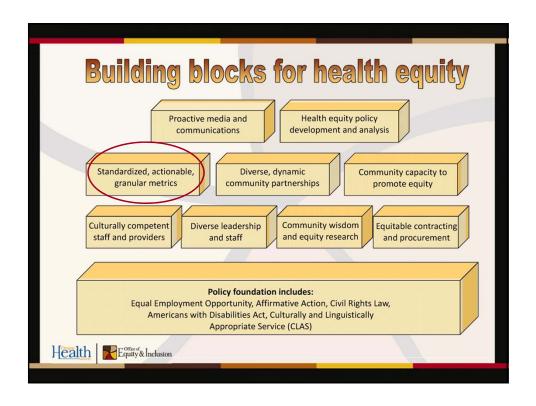

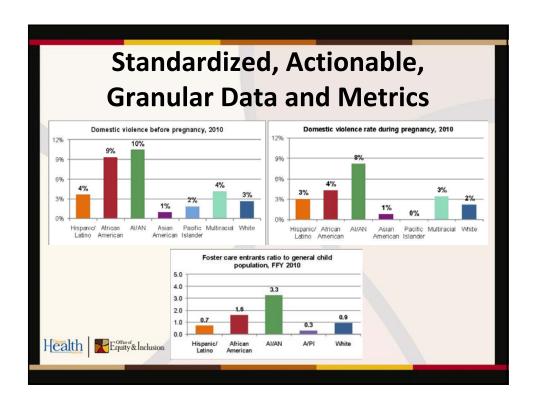

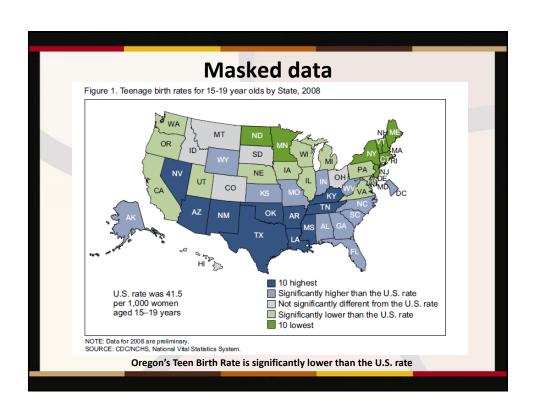

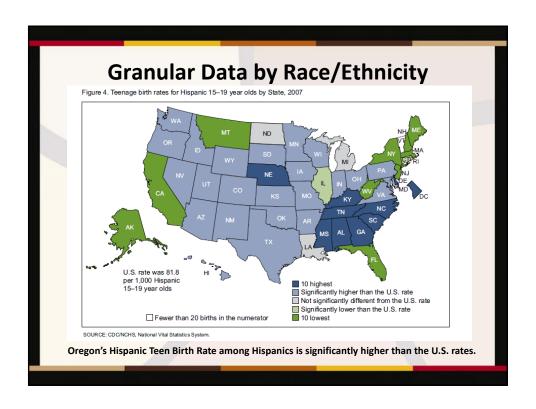

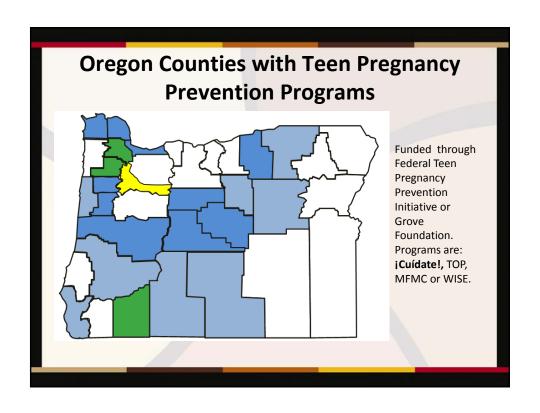

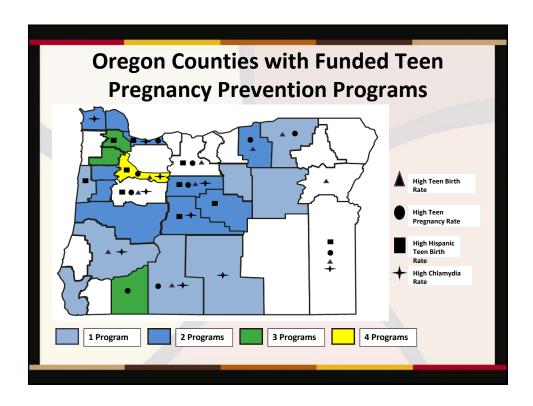

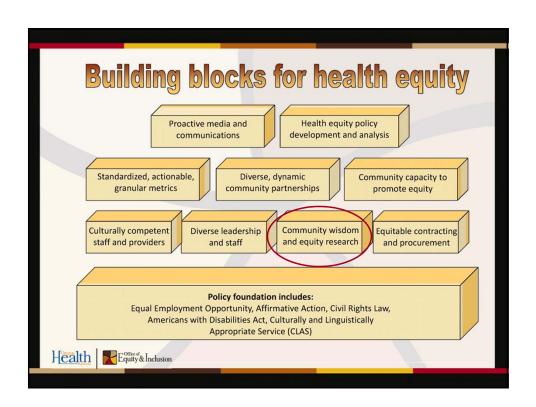

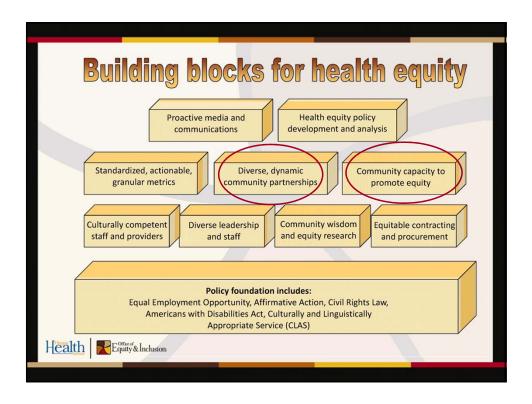

# **Equity in Action: Example from Kaiser Permanente (California)**

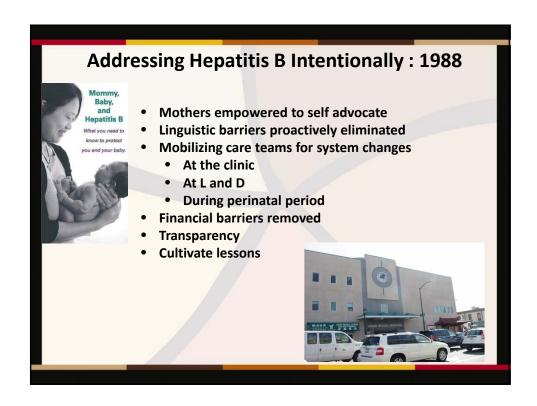

Courtesy of Winston Wong, MD, MS, Medical Director, Community Benefit, Disparities Improvement and Quality Initiatives, 2014

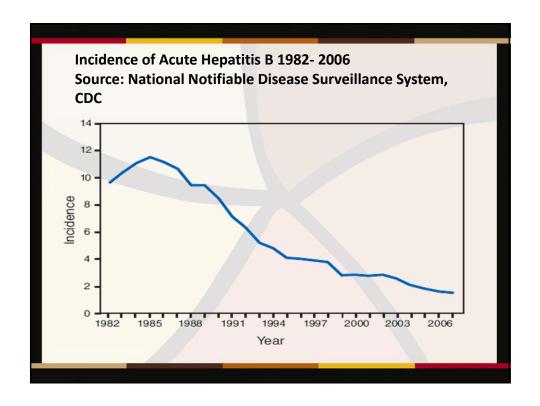

In the U.S. there are nearly as many people living with HBV infection as HIV/AIDS

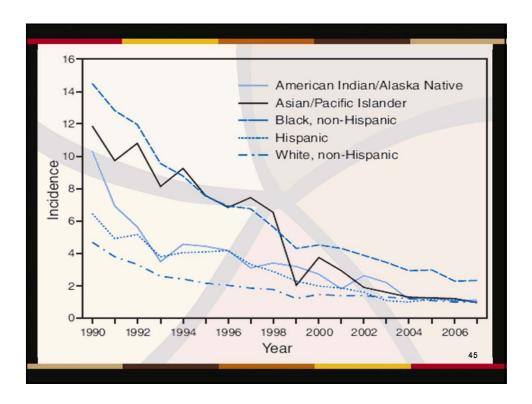

Two-thirds are not aware they are infected because they have not been tested.

1 in 12 Asian Americans is chronically infected with HBV
